

Plain PDF Quiz Upload Test

This is a simple text-based PDF for StatKarmayog quiz generation testing.

Topic: Sampling and data quality in official statistics.

A sampling frame is the list of units from which a statistical sample is selected.

Stratified sampling divides the population into meaningful groups before selecting samples.

This can improve precision when groups are internally similar and differ from each other.

Data quality checks include completeness, consistency, validity, timeliness, and accuracy.

Completeness checks whether required fields are present in the dataset.

Consistency checks whether related values contradict each other.

Validity checks whether values follow allowed ranges, formats, and rules.

Assessment questions should test whether an officer can identify a sampling frame, choose stratification variables, detect missing values, and select suitable validation checks.
